Touch-Up Pens

The touch-pens are specially designed for touching up those small scratches and markings.

With a dual function, nib and brush, this helps to touch up very precisely.

Pull off the clear lid to access the nib, where you squeeze the bottle for the paint product to target those tiny awkward defects.

Screw off the lid and then you can use the very fine brush for touching up.

A ball bearing is in each touch-up pen.

It is important to shake the touch-up pen before use.
